DETAILED ACTION

Drawings

1. The drawings are objected to because the block elements are not designated with labels. They should be properly labeled on the next communication. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Cove et al. (6,266,098) in view of Harrison et al. (5,724,102).

Regarding claims 1-11, Cove discloses all the feature of the invention as shown in Figure 1 except the demonstration functions as claimed. Harrison, from the similar field of endeavor, teaches the demonstration functions as claimed. It is well known that television monitor parameter adjustments are very difficult for some people to master. In order for these people manage to control their television set, they have to be well instructed. However, instructions are usually not readily available every time the user encounters a problem. And most of the times the user ended up with frustration without

the help of proper instructions. Harrison solves this problem by providing video instructions or demonstrations to the user. With the video demonstrations, a user can easily perform the television set adjustments without any difficulty. Hence, it would have been obvious to one of ordinary skill in the art at the time of the invention was made to include the video demonstration features of Harrison into Cove to perform the well known functions as claimed.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Marics (5,574,494) shows a visual menu system.

Hamilton et al. (6,011,539) shows a instruction system.
